PROTOCOL OVERVIEW

PolSage is a next-generation decentralized matrix protocol engineered natively on the **POLYGON blockchain**.

By combining immutable smart contract architecture with a dual-matrix compensation structure, **PolSage** establishes a transparent, peer-to-peer ecosystem where rules, placements, and reward distributions are executed automatically without central oversight.

Built on Polygon Blockchain

KEY ARCHITECTURE

PolSage Framework features an interconnected dual-matrix ecosystem designed to drive scalable growth and long-term earning potential.

X3 Matrix: Built for direct referral acceleration and active recruitment.

X6 Matrix: Engineered for team spillover dynamics and broader network leverage.

Both structures operate across 16 progressive tiers, allowing participants to systematically scale their involvement and unlock higher reward capacity over time.

Core Operational Principles

Transparent: All matrix movements and payouts are publicly viewable on-ledger in real time.

Atomic: Instant, indivisible smart contract execution with zero processing delays.

Verifiable: Immutable on-chain logic ensures complete peer-to-peer execution without admin intervention.

Built on Polygon Blockchain

REGISTRATION & ACTIVATION

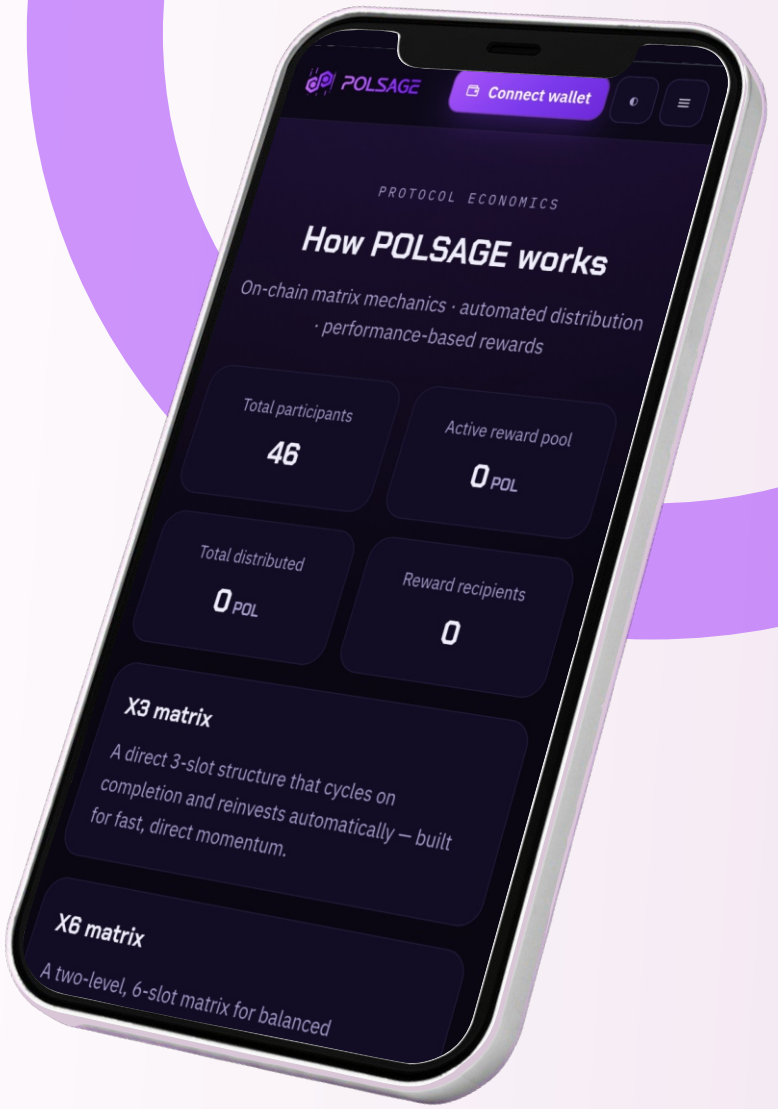

Joining PolSage

Referral-Driven Onboarding: Registration requires an existing sponsor address to seamlessly integrate you into the matrix structure.

Instant Dual Activation: A single initial transaction automatically unlocks Level 1 across both X3 and X6 matrix programs.

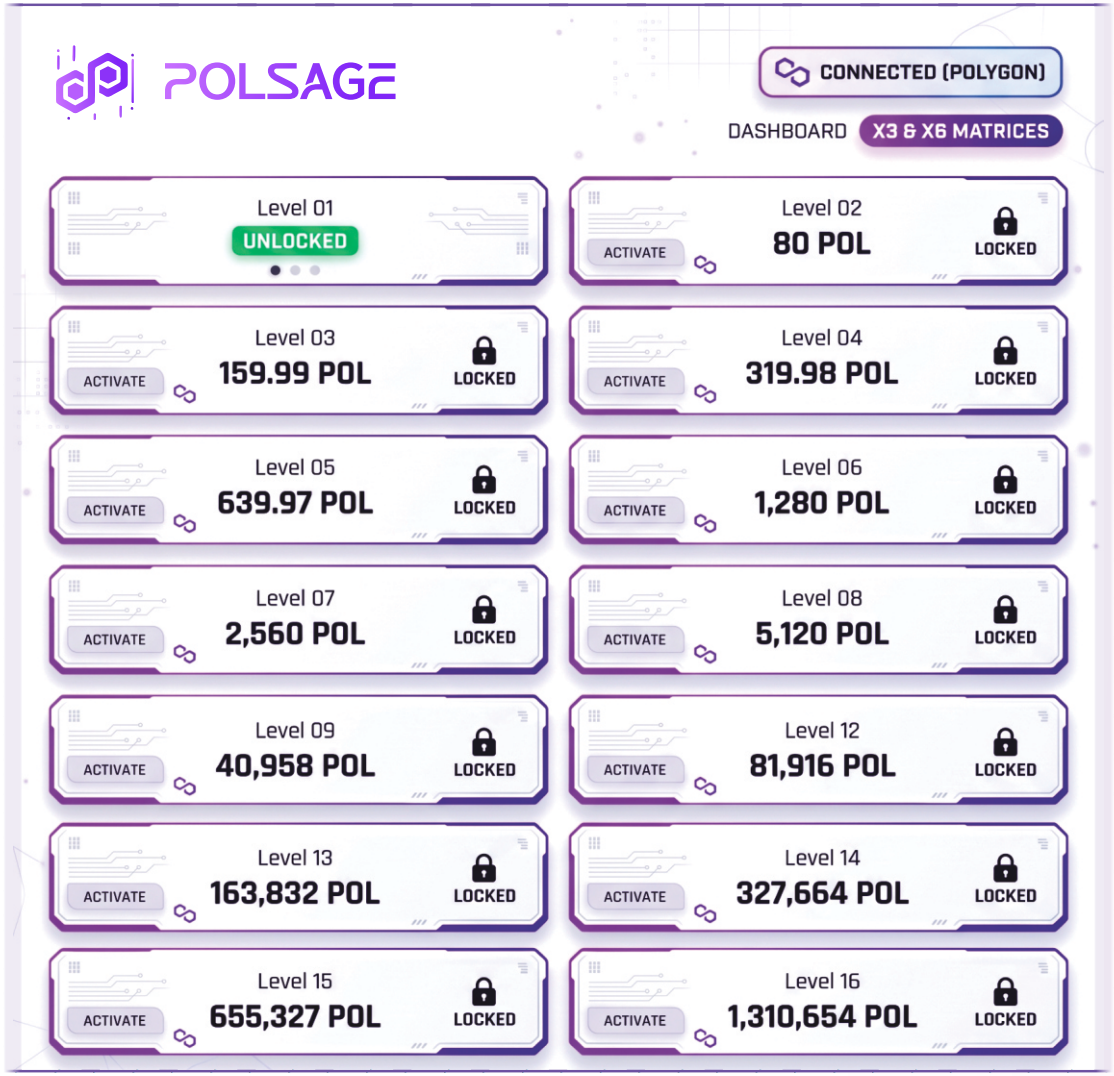

Atomic On-Chain Settlement: Account creation and slot placements execute as an indivisible, tamper-proof blockchain transaction.

Automated Direct Payouts: Rewards route directly to participant wallets in real time, eliminating admin controls, approval queues, and manual withdrawal requests.

Built on Polygon Blockchain

LEVEL PROGRESSION STRUCTURE

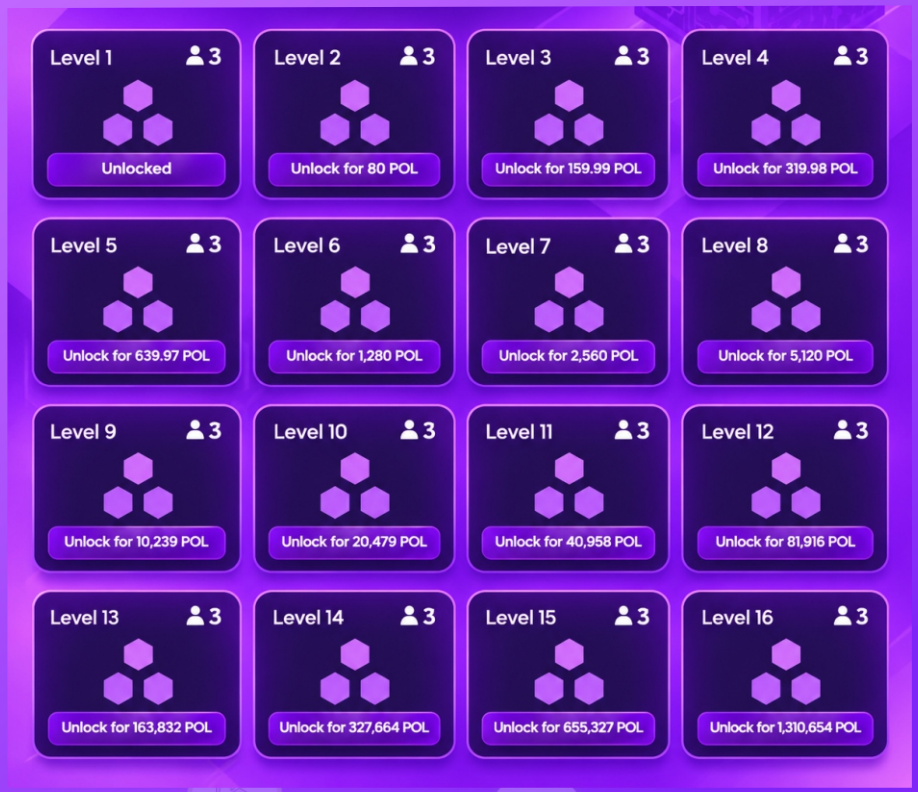

PolSage operates on a structured, progressive level system where each level doubles in value.

To maintain eligibility for matrix placements and rewards, users must activate the next higher levels as they progress.

Built on Polygon Blockchain

X3 MATRIX

Direct Referral Structure: X3 Matrix

Structure Design: A 1 × 3 matrix consisting of you and three referral positions.

How It Works

- Each direct referral fills one available position in your matrix.
- The first two positions generate direct earnings for you.
- Filling the third position completes the matrix and triggers an automatic cycle.

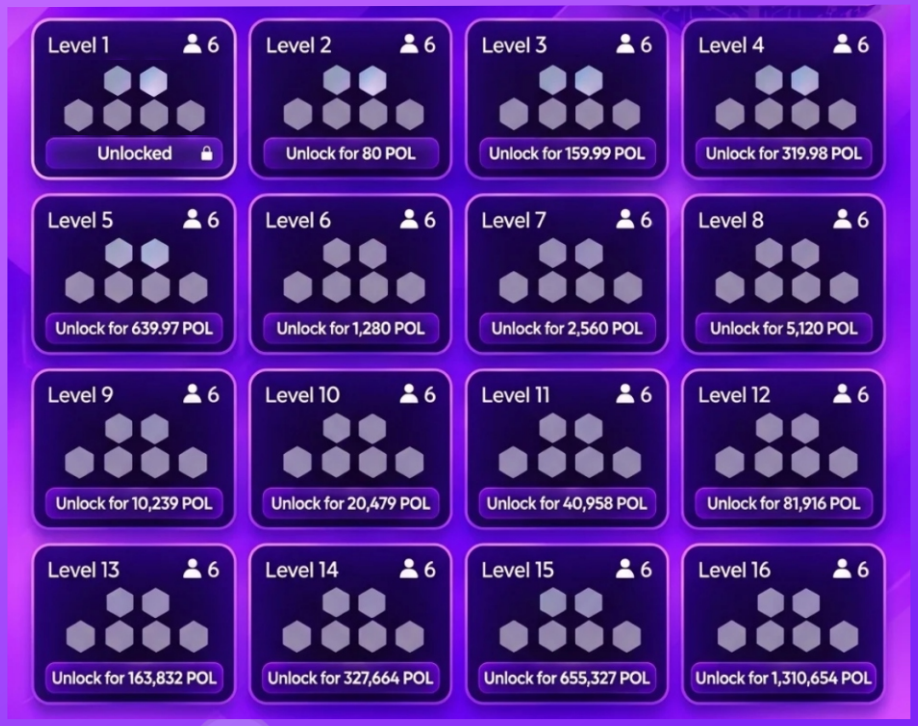

The cycle payment is forwarded to your sponsor. Your matrix then automatically reinvests and resets, opening up new positions for another cycle.

Key Features

- Rewards are driven by your direct referral efforts.
- Automatic reinvestment keeps the matrix active.
- Payments and cycling are processed automatically.
- Ideal For Users who want to grow through direct referrals, earn from referral placements, and benefit from recurring matrix cycles.

Built on Polygon Blockchain

XS MATRIX

Team & Spillover Matrix Architecture

Structural Design: A 2-tier matrix comprising 6 total positions organized into two rows.

Payment Routing & Execution

- **Row 1 (2 Positions):** Yields from these slots flow directly to your sponsor/upline.
- **Row 2 (4 Positions):** 100% of rewards generated from these 4 slots are dispatched directly into your wallet.

Multi-Stream Earning Mechanics

- **Direct Referrals:** Earn when your personal invites land anywhere inside your matrix.
- **Upline Spillover:** Automatically fill matrix positions through the activity of members above you.
- **Downline Overflow:** Capture rewards as your team expands and builds momentum beneath you.

Strategic Advantages

- **Synergistic Growth:** Aligns upline and downline incentives to accelerate ecosystem momentum.
- **Passive Yield Potential:** Monetize network momentum via automatic spillover placements.
- **Continuous Re-entry:** Designed to reward long-term participation through ongoing matrix cycling and slot expansion.

Built on Polygon Blockchain

REWARD POOL MECHANICS

Shared Reward Pool Mechanics

- **Automated Pool Funding:** A fixed percentage of every transaction across the platform automatically feeds into a shared community reward pool.

- **Score-Based Earning:** Unlocking higher matrix levels and bringing in verified referrals directly increases your performance score.

- **Proportional Yields:** The higher your total score, the larger your payout share during each distribution cycle.

- **Direct On-Chain Settlement:** Distributions execute automatically on the Polygon network directly to your wallet; eliminating admin approvals, queues, and manual withdrawals.

Built on Polygon Blockchain

CORE PRINCIPLES

100% On-Chain Execution:
Deployed natively on Polygon with zero human intervention or admin keys.

Immutable Contract Logic:
Core rules are locked permanently on-ledger and can never be changed or tampered with.

Instant Wallet Settlement:
All matrix payouts and rewards route directly to your Web3 wallet in real time.

Automated Re-Entry Cycling:
Seamlessly triggers automated slot renewals to keep generating spillover.

16 Progressive Tiers:
Scalable matrix economics with predictable costs and earning potential across all 16 levels.
